

Start server first

Then 1st client and connect, next 2nd client and connect next 3rd client and connect and so on

Choose chat on any of the clients, type message, then send

Preliminary work:

Write in detail the flowcharts, work flow, state diagram plus design manual to support your understanding of the socket program example

Group Project details:

1. How to send message only to a certain client ?
2. When certain client disconnect then in Server that specific client name will appear – not just “Lost a connection” how to make this happen ?

Online users :

aaa

bbb

ccc

Lost a connection. → should be clearer who has disconnected

Online users :

bbb

ccc

3. How to make bottom label (“Techworld3g”) changed to Client’s name
4. How to send file only to a certain client ?
